### Notes:

The nominal luminous flux is the indicative LED luminous flux, based on information provided by the LED manufacturer, with 4000K colour temperature and CRI70 colour rendering. The real luminous flux of the luminaire depends on its environment (e.g. temperature or impurities), the colour temperature and colour rendering of the LED as well as the optical efficiency of the luminaire. All values in ambient temperature of +25°C with CLO constant light output control and light distribution V11 or 07. Luminous flux tolerance +-10%, power tolerance +-10%.

B) Optic family B (for example V07)

Luminous flux factors:

LED 3000K CRI70 = 0,91

LED 5000K CRI70 = 1,00
